

### 100% Historical Data

ALL historical data is permanently tracked and accessible by a single click or keystroke. There is no need to go to a separate inquiry screen that shows only partial historical data. Right on the main parcel screen you can look forward or backward by year and when you do you'll see ALL the data for that parcel just as it was in that year.

### Instant Calculations

This technique provides for the immediate calculation and recalculation of all computer generated values automatically upon entering or changing any of the parcel data. You no longer have to run (or reset) various processes in order to compute these values. And you no longer have to wait until all information is entered to review calculations or move onto "the next step". You can enter your data as you desire. But feel safe because we have provided switches that allow you to freeze or lock various data at various times. These instant calculations are utilized for equalizations, exemptions, taxes, interest and fees, and more.

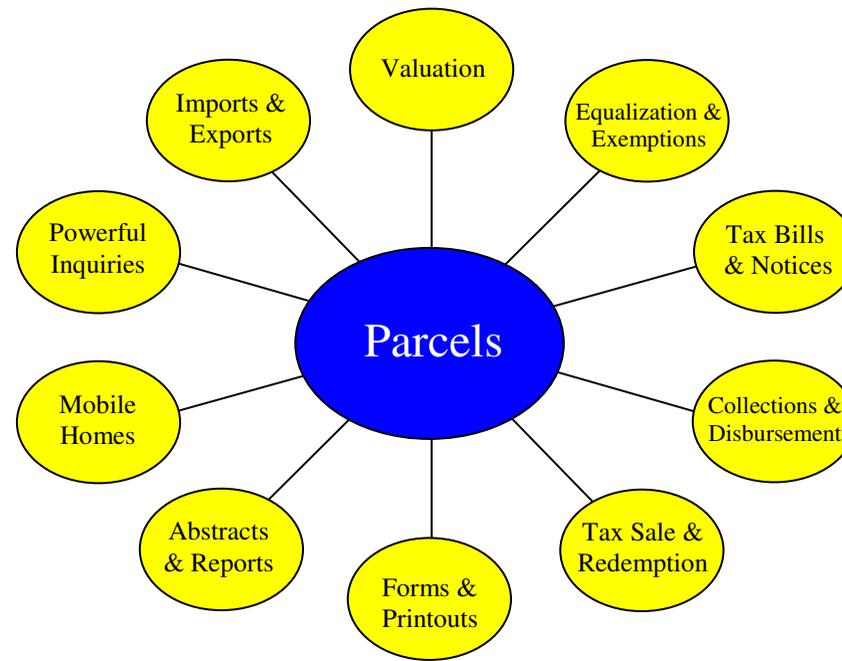

### Un-Paralleled Inquiries

Uniquely flexible inquiries allow you to locate a specific parcel or a group of parcels by many criteria, but by a single simple look-up window that is accessible from the main parcel screen. This inquiry allows you to find parcel(s) by parcel #, alternate #, township, subdivision, street, address, name, assessed value, extensions, and much more. Additionally, you can inquire by partial fields such as typing in only the first few characters of the name. Also, you can search by legal description containing certain phrases or keywords. Lastly, some fields, such as assessed value, can be inquired by a range of values. All at your fingertips this system is truly advanced when it comes to inquiry capabilities.

### Interfaces

User definable imports and exports allow easy integration with other software such as GIS, CAMA, as well as automatic statement processing from bank and mortgage firms.

## Complete Tax Administration

- ◆ Assessors
- ◆ Clerks
- ◆ Treasurers

Parcels

Year: 2006

Parcel #: 01-01-02-400-006 Tax Year: 2006

### Complete Audit Trails

Comprehensive audit trails automatically track changes made to parcel data and can later be viewed or printed.

### Parcel Data Sheet

This single printout eliminates the need to print multiple screens or attach several printouts. This printout, accessed by a single click from the main parcel screen, provides a single comprehensive report containing all of the parcel information on one clear, concise, easy-to-read form.

### Parcel Images

Digital photos of various types can be linked to a parcel and displayed in the images tab of the main parcel screen, as well as printed on the parcel data sheet.

### Internet Public Access

A specially designed public inquiry screen displays the data and information that is viewable by the public. This inquiry is designed for access via the internet. Similarly, a second public access screen is available for in-office walk-in traffic.

### Support... Support... Support

Superior support has been the key to our success for the past 21 years. When you call our office you can ask for support staff by name and speak with a property tax expert that has worked on the design and implementation of your software.

### Price

Our software is the most affordable on the market. We offer a unique pricing package that combines licensing, support, and maintenance all into one annual usage fee. This eliminates the costlier expense (and lock-in effect) of purchasing the software up front. And we don't require long-term contracts. We are a technically driven company, not a sales driven company. We earn your future business, not through contracts, but by earning your satisfaction.

#### Highlights

**instant calculations**  
**100% complete historical data**  
**unparalleled parcel inquiries**  
**capacity for partial payments**  
**comprehensive parcel data sheet**  
**customizable imports and exports**  
**internet accessible public access inquiry**  
**advanced re-useable addressing**  
**partial year prorated exemptions**  
**completely integrated (eliminates data rollover)**  
**easy updating of districts, levies, and tax codes**  
**quick payments via barcoded tax bills**  
**payments from multi-parcel payers**

#### Other Features

**farmland bulletin 810**  
**PTELL**  
**TIF districts, enterprise zones and abatements**  
**normal, special, and final disbursements**  
**accelerated or normal billing**  
**tax sale, redemption, and forfeitures**  
**mobile homes**  
**legislative abstracts and reports**  
**user definable format for parcel numbers**  
**password protection (and restrictions by user role)**  
**interfaces to banks, mortgage firms, GIS, CAMA, & etc.**  
**forms designed for plain paper laser printers**

## We'll Be Here For You!

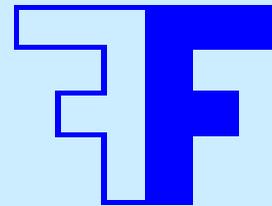

Since October 1983, Fike & Fike, Inc. has developed and implemented comprehensive computer systems for business and industry throughout the U.S. and Canada. Our systems range from full scale accounting, to warehousing, to healthcare, and to publishing. We utilize hand held technology, radio frequency wireless, EDI data processing, bar coding, Pocket PCs, biometrics, and more. Our superior capabilities in software design and development have been proven time and time again.

In 1995, Fike & Fike, Inc. began providing backup support for property tax software to Fidlar Doubleday Corp, one of the major vendors in Illinois Property Tax Software. Dave Coe, a principal partner in our firm, had earlier been one of the original developers in Fidlar's PC based software.

In 2003 Fike & Fike, Inc. began providing services directly to Illinois counties, as Fidlar retired from the market. We acquired rights to the Fidlar software and began making long awaited improvements.

Also at that time, we started development of a completely new, modernized and state-of-the-art, advanced property tax system utilizing the latest in software technology. This new technology allowed us to create a far superior system with unparalleled functionality, flexibility, and ease-of-use. This new version was released in the spring of 2004.

As of spring 2006 this state-of-the-art software is fully utilized in 10 Illinois counties totaling 250,000 parcels. We also provide some of these counties with computer and networking services, as well as offer custom programming. Centrally located in Bloomington, we are only a few hours from any county in the state.
